SUMMARY

Full-stack CS student (CGPA 9.08/10) with hands-on experience building cloud-native applications using React, Flask, and AWS. Architected Vaultify, a platform unifying four AWS services behind a single dashboard, and won at Aarohan Hackathon, Techfest IIT Bombay across 8+ hackathons. Looking to join a fast-moving engineering team where I can ship real features, deepen my system design skills, and build products that matter.

EDUCATION

Vellore Institute of Technology, Bhopal Aug 2024 - Aug 2028
Bachelor of Technology in Computer Science; CGPA: 9.08/10 *Bhopal, India*

PROJECTS

Vaultify | Cloud Infrastructure Platform
Node.js, Express, React, AWS (S3, EC2, Lambda, Rekognition), JWT
GitHub: github.com/VikTheBuilder/VAULTIFY

- Architected a full-stack cloud platform unifying four AWS services (S3, EC2, Lambda, Rekognition) behind a single REST API and React dashboard, with JWT-based auth and per-user resource isolation
- Built an event-driven AI tagging pipeline (S3 trigger → Lambda → Rekognition) that automatically labels uploaded images without manual intervention
- Implemented a billing engine with configurable margin-based pricing, pre-signed URL file sharing, and version history across 7 S3 storage tiers

UnSpoken | Real-Time Sign Language Translator
Python, Flask, MediaPipe, Random Forest
GitHub: github.com/VikTheBuilder/Sign_language_translator_v1.0

- Built a Flask backend that serves real-time gesture predictions from a trained Random Forest classifier
- Integrated MediaPipe hand-landmark detection to convert live video frames into structured feature vectors for inference
- Exposed REST endpoints decoupling the ML model from the client, enabling reuse across different front-ends

Equilibria | Productivity & Wellness Dashboard (Contributor)
React, TypeScript, Firebase
GitHub: github.com/VikTheBuilder/Equilibria-New

- Extended a full-stack dashboard with journaling, mood, expense, and academic-tracking modules
- Implemented Firebase Authentication and Firestore-backed persistence for secure, per-user data storage
- Built responsive UI components in TypeScript while collaborating with a multi-developer team via Git/GitHub

PRAHARI | AI-Driven Grievance Management (Contributor)
Python, Flask, AI, Blockchain, Twilio
GitHub: github.com/aniketpandey2705/project-prahari-team-diamond

- Built backend APIs supporting IVR-based grievance intake and routing
- Implemented AI-based transcription and sentiment analysis to triage incoming reports
- Collaborated across a multi-developer team using Git and GitHub for version control and code review

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript
Frameworks/Libraries: React, Flask, Node.js, Express, Tailwind CSS
Cloud & Databases: AWS (S3, EC2, Lambda, Rekognition), Firebase Auth, Cloud Firestore
Developer Tools: Git, GitHub, RESTful APIs, JWT Auth
Coursework/Other: Data Structures & Algorithms (200+ LeetCode problems solved), Object-Oriented Programming, System Design fundamentals

LEADERSHIP & ACHIEVEMENTS

- Winner, Aarohan Hackathon @ Techfest, IIT Bombay
- 8x Hackathon Finalist across collegiate and national-level events
- Certifications: Google Cybersecurity Certificate – Coursera, Programming in Java – NPTEL, Full Stack Web Development Bootcamp – Udemy, Machine Learning A-Z – Udemy, Cloud Computing – NPTEL, Marketing Analytics - NPTEL
